

NEIGHBORHOOD UPDATE

**HIGHLAND HOSPITAL
ACUTE TOWER
REPLACEMENT
PROJECT**

FAST TRACK

The Emergency Department will soon debut a new Fast Track care area. Six intake stations have been relocated to a larger space and are equipped to receive and address patients with relatively minor injuries or illnesses. This capability helps the Emergency Department staff focus on trauma cases and life-threatening injuries while also attending to less critical cases. This targeted triage approach will ensure more appropriate care in the Emergency Department for everyone seeking its services.

UPCOMING CONSTRUCTION ACTIVITIES: 4/2017 - 6/2017

- ▶ Demolition of the H-Building continues.
- ▶ Increased truck traffic from the old Service Road onto 14th Avenue during demolition activities.
- ▶ Noise from demolition activities will be increased from 7am to 7pm, Monday to Friday.
- ▶ Weekend work may be necessary. No work on the weekend will begin before 9 am.
- ▶ Construction equipment and barriers are located at the front entry drive loop as work on the bioswale continues.

EAST END ENTRY GETS A FACELIFT

The entry to the Koret Building and Acute Care Tower will provide direct access to the Emergency Department, Koret Building, and Acute Care Tower. Stone facades and a sleek canopy mark the entrance, located immediately adjacent to the east end of the front entry drive loop. When it opens, both patients and staff will benefit from more convenient access to these buildings and their critical campus services.

BIOSWALE UPDATE ▶

The recent pause between rains storms has allowed construction on the bioswale to continue. The structure is designed to remove pollution from run-off water in the front entry loop area, and is an essential component of the storm water management program on the Highland Hospital campus. When the demolition and removal of the concrete is complete, final landscaping will be installed making this area beautiful as well as functional.
